We test your LMS for delivery before purchase. Verified LMS installation; Convergence, SABA, SumTotal, RISC, SuccessFactors, MaxiT, Blackboard, Moodle, Cornerstone and many more.. and we can do your LMS course(s) install if requested !

- Level I - Basic Presentation. This is the lowest level of courseware development in that Level I lessons are linear (one idea after another), and are used primarily for introducing an idea or concept. There is little interaction, other than the student touching the screen or using a keystroke or mouse click to continue. The media used are primarily text and graphics (not complex). Estimated Average Cost per Hour Of Instruction - \$1,901.00 to \$2,170.00
- **Level II - OUR CDP CORE MODEL - Medium Simulation Presentation. This presentation level involves the recall of more information than a basic Level I presentation and allows the student to have increased control over lesson presentation; that is, there is more interaction, such as using a light pen to rotate a switch. CMI is used in Level II lessons to track and analyze student performance. Level II normally combines audio, video, text, graphics and animation. Estimated Average Cost Per Hour Of Instruction - \$3,768.00. We build the courses once, continuously improve the courses, sell to multiple firms to reduce the costs. Lets be conservative and price build cost at \$2500 per course.... 75 X \$2500 = \$187,500... in-house or third party development.**
- Level III - High Simulation Presentation. This level involves aspects of both Level I and Level II while using the full abilities of ICW. Level III may present on screen interaction similar to that used in an aircraft simulator. This level provides a high degree of interactivity, extensive branching capability, maximum mediation opportunity (supports multiple levels of errors), real-time event simulation with minor equipment limitations, capability to interface with other output devices, and thorough CMI capability. Estimated Average Cost Per Hour Of Instruction - \$7,183.00
