Introduction

Welcome Safety folks...

Let me introduce myself, my name is Troy Hackworth and for 35 years we have been developing safety training for classroom, online and custom training needs for 1000s of companies worldwide.

Why safety?

In the 1970's, I was crippled in a mining accident. My job training for the job consisted of 45 minutes of instructions on how to drive a TEREX rock truck fully loaded up and down a mountain. The training was inadequate and now, I am paying the consequences for the rest of his life. I understand that an injured employee and his employer are not the only ones affected by an incident. Entire families are affected, many times for generations.

Our Mission - It's simple, when it comes to safety, we want everyone to be trained; No Excuses, No Bull without cost or complexity being a limiter.

Thanks for helping to be safe...

Sincerely,

Troy Hackworth

About...

Consolidated Digital Publishing Inc. (CDP's) team - for 35+ years has served as a full-service production, course development and content provider for your QHSE Classroom, CBT and Internet-based training to firms worldwide.

Our goal & training model

Our Goal: Develop a global community to support a social constructionist framework of QHSE education.

Our Model: Our Services... [Provide FREE & Affordable training](#) to any firm which desires or needs to train.

The ability to upgrade to our purchase products for needed compliance and operator training & reporting at a price any firm can afford.

Simply \$999.00 with full ownership and use!

Creating Online Lectures with Microsoft PowerPoint

Creating Online/Classroom/Individual HSE Training with Microsoft PowerPoint

...for custom company and site-specific training content...

Introduction

PowerPoint with voiceover can be a very good choice for creating an online safety lecture. It adds a human touch to your slides and allows you to provide information in addition to the visuals on the slides, such as voice explanations of a graphic, definitions, facts, and examples. You can easily create a narrated slide presentation using the voiceover feature in PowerPoint for Windows, or PowerPoint for Mac in combination with QuickTime.

After recording your presentation, you may notice that the file size is very large (because of the embedded audio) and wonder how to provide such a file to your students. The answer is that, to reduce file size, you must convert your file to video. After doing so, you can upload your video to a media storage/sharing site and post a link to a training page created for your website HSE pages. (1)

Research has shown that students learn as much with online/web lectures with voiceover as they do in a traditional in-class lecture ([Lents & Cifuentes, 2009](#)). Students have indicated a preference for simultaneous display of visual and audio content (i.e. video/lecture and voice together) rather than separate ([Griffin, Mitchell, & Thompson, 2009](#)).

Limitations

A possible downside to PowerPoint with voiceover is that the quality of your presentation can be limited by the quality of the equipment to which you have access and the area in which you record the voiceover. (2)

What would it cost you to develop these programs from scratch?

Level I - Basic Presentation. The courseware development in that of Level I lessons which are linear (one idea after another) and are used primarily for introducing an idea or concept (Awareness training). There is little interaction, other than the student (or trainer) touching the screen or using a keystroke or mouse click to continue and the use of supplied quizzes (MS Word) for training validation and documentation. The media used are topic information text and graphics using PowerPoint as the development tool for ease of customization and keeping courseware evergreen.

These also serve as the core content for conversion to higher levels of development (Level II, III) using tools such as Articulate 360, ISpring, Lectora, Camtasia etc. Estimated Average Cost per Hour Of Instruction: \$1,900.00 to \$2,170.00*.

Being conservative and giving a development cost of \$1,000.00 each; the price to develop the entire catalog would be in excess of \$225,000.00+ plus thousands of hours of work!

WE CHARGE A FRACTION OF WHAT IT WOULD COST TO DEVELOP FROM SCRATCH1.

*Source Information: Click [Estimating Costs and Time in Instructional Design](#) (opens in new window) Interactive Courseware (ICW) Development Costs for Multimedia and Computer Based Training (CBT): (U.S. Navy Estimate - Klein, Mallory, Safstrom)

The package provides 38 Gigabytes of safety program materials in these 8 folders:

- 000_10HR Outreach_GI-Construction_29**
- 001_OSHA_EPA_DOT_HR_127**
- 002_Hazard Awareness_14**

Introduction

The Difference Between Content Curation and Content Creation

To curate or create?

It's a question that many marketers ask themselves when planning their strategy.

Luckily, the answer isn't one or the other. It's a combination of both curation and creation that can help trainers achieve great results.

For years, training content creation has been pointed to as the holy grail for training. From eBooks and infographics to blog posts and presentations, the idea that content is king has resulted in a content boom.

One of the best content platforms in the world is Netflix. [Trainers can learn a lot from Netflix](#) as it relates to both content acquisition and data driven decisions. It's an entity that has perfected both the creation and curation of content. Content creation is the act of taking an idea and turning it into an actual piece of content. Content curation is the act of finding great content, modifying it to meet your training needs and then distributing it across your own training channels.

These are two things that Netflix does better than anyone.

Netflix leverages **content creation** when they take an idea and turn it into original programming. The Netflix series *House of Cards* or the documentary, *Making A Murderer* are both great examples of content created by Netflix. .

Research from found that 23% of Netflix subscribers subscribe because of the [original programming](#).

Netflix also specializes in **content curation** by finding and licensing great content that was developed by other production studios. For example, Hartswood Films, BBC Wales and WGBH are the production studios behind the hit series, *Sherlock*, but anyone can watch if they have a Netflix account..

Why You Should Create Content

If you're able to create work and site-specific content consistently and deliver training value, your trainees will keep coming back to use. Here you focus on topics unique to your business and work environment.

Why You Should Curate Content

Training content curation is when you take the content created by others and filter through it to identify content your audience should be consuming for regulatory and compliance training.

Should You Curate or Create Content?

Let's go with both. Netflix is a great example of the perfect curation and creation mix.

You should strive to have some training channels in which you're acting as a content curator and others in which you're the creator. [For example, if you're the owner of a manufacturing plant; you want to create training unique to your process and curate an off-the-shelf Lockout Tagout to fit energy isolation for that process.](#)
